Antipredator Defenses in Birds and Mammals

The discrimination ability of Texas Horned Lizards (*Phrynosoma cornutum*) during antipredator responses was tested with snakes of two genera having distinctly different prey foraging and ...

Antipredator Defenses in Birds and Mammals.

Birds most likely evolved an innate aversion to PAN to avoid poisoning by HCN, which is only produced in large quantities in attacked gregarious locusts. Thus, we confirmed our hypothesis that PAN participates in antipredator defense in locusts by acting as an aposematic olfactory signal and toxin precursor.

Phenylacetone nitrile in locusts facilitates an antipredator ...

butterfly fish--Black circle is very obvious on butterfly fish, makes predator think it is an eye so predator attacks 'eye' (aims for head). Fake eye spot at back end and stripe through its actual eye. Fish surges forward when it feels something touch its tail and it can often get away.

Antipredator Defenses Flashcards | Quizlet

Fieldfares are birds which may nest either solitarily or in colonies. Within colonies, fieldfares mob and defecate on approaching predators, shown experimentally to reduce predation levels. Within colonies, fieldfares mob and defecate on approaching predators, shown experimentally to reduce predation levels.

Anti-predator adaptation - Wikipedia

From the giraffes that rely on their spotted coats to blend into the patchy light of their woodland habitats to the South American sea lions that pile themselves in heaps to ward off the killer whales that prey on them in the shallow surf, defense strategies in the animal kingdom are seemingly innumerable.
