Sample Exam Questions Chapter 20 & 21 - Heart & Blood Vessels

The blood is transported to the tissues via the vessels. The main propulsion is by the ventricular contractions. Blood leaves the heart via the arteries, reaches the tissues via the capillaries, then returns to the heart via the veins. Each blood vessel has a space through which the blood passes; this is the lumen. The structure of the vessels ...

Biology : Human Circulation - Blood Vessels - Multiple choice

The viscosity of blood does not impact the pressure that is exerted on the wall of a blood vessel. Venous pressure is not typically measured, as it is much lower than arterial pressure and is relatively unaffected by heart contractions due to the narrowness of the preceding capillaries.
